

DCRI CARDIOVASCULAR AND METABOLIC

Collaborating to Improve Patient Care

The Duke Clinical Research Institute (DCRI) is the world's leading academic research organization, with a rich history of conducting cardiovascular clinical trials and outcomes studies while educating the next generation of clinical researchers. The DCRI is dedicated to streamlining and advancing clinical research through innovative study design, fit-for-purpose approaches, thoughtful analytics, and a commitment to rapid knowledge dissemination—helping to improve patient outcomes.

OUR CARDIOVASCULAR STUDIES

Faculty Thought Leadership

- Practicing physicians apply their clinical experience to design realistic protocols that train and support investigator sites.

Patient- and Site-Focused

- Patient safety, engagement, and outcomes are at the center of our work.
- Collaborative relationships with sites are essential to success.

Emphasis on Quality and Integrity of Trial Conduct

- Trials adhere to guiding principles.
- Operations are data-driven.
- Trials integrate with standard-of-care clinical practice.
- Every trial utilizes efficient processes.

STUDY PHASE

IMPROVING PATIENT OUTCOMES

Every year, more than 35 million patients walk through the doors of hospitals and clinics with questions about their health and their care. Questions range from medication dosing and treatment expectations to paying the bill. Every question is equally important to patients and to those who love them. A significant part of improving outcomes is improving what patients know. At the DCRI, our research is focused on three critical areas:

Assessing Population Health

Who are the patients and what are their experiences?

Researching Clinical Care and Outcomes

Are they getting the right treatment, at the right time, for the right outcomes?

Changing Patient Care

How do we fundamentally change clinical practice?

What We Offer:

- Thought leadership in phase I–IV clinical and outcomes research
- Extensive network of investigators
- Streamlined site start-up process
- Rapid recruitment of the right patients into the right study
- Prompt and effective dissemination of evidence into practice
- Improved quality in care
- Management of multiple national registries
- Renowned biostatisticians and data scientists

REAL-WORLD SOLUTIONS FOR CV CHALLENGES

Our faculty and operational experts translate novel therapeutic concepts into effective and efficient clinical trials across the spectrum of cardiovascular conditions, including:

- Acute coronary syndromes
- Antithrombotics/thrombosis
- Chronic coronary artery disease and coronary atherosclerosis
- Dyslipidemia and hyperlipidemia
- Electrophysiology
- Heart failure
- Peripheral vascular disease
- Diabetes mellitus
